

## Distribution Network Maintenance Services

---

As a follow on to our Distribution Network Data conversion and validation projects, **Sierra Pacific Resources** has contracted JCMB to provide both on and off-site Distribution Model Maintenance Services.

This consists of experienced Drafting and Database maintenance labor to inexpensively map the "As Built" or post-construction model changes. In some cases, this is new construction and in others, routine maintenance. The contract guarantees a specific quality level and "turnaround time". On-site labor is also provided in support of new Construction Design projects.

With the ability to exchange source drawings, sketches and notes electronically, our customers are now able to take advantage of off-site drafting production facilities. Updated Distribution Model Data is returned to the customer using a specialized data transfer tool called, *Adele XP*.
